

1. What are the different loops Java provides us with? 5. What is your favorite thing you learned this week?

The different loops provided for us with Java are, for loops, while loops, and do while loops. There are slightly different variations of each with enhanced for loops and nested loops but all have the same three principles. My favorite thing I learned this week is fully understanding how loops and conditionals work. I was familiar with them from my short time learning python but struggled fully understanding. With this knowledge, I was finally able to complete the "FizzBuzz" problem that I've been wanting to learn for months now.
